

Hosting Projects with Open Mainframe Project

Mission of the Open Mainframe Project:

Build community and adoption of Open Source on the mainframe

- **Eliminating barriers** to Open Source adoption on the mainframe
- **Demonstrating value** of the mainframe on technical and business levels
- **Strengthening collaboration** points and resources for the community to thrive

Creating spaces for mainframe community open source collaboration

Open Source Isn't Slowing Down Any Time Soon

The Real Question is Which Projects Matter?

LF seeks to accelerate new projects to adoption and sustainability

The Answer: Projects With Sustainable Ecosystems

Sustainable projects have a developer community whose technology is used in commercial solutions that profit businesses, who in turn participate and reinvest back into the project and hire developers to work in the community.

Open Source on Mainframe - Ecosystem Challenges

Creating sustainable open source projects requires real work

Governance and Membership	<ul style="list-style-type: none">• Incorporation, Tax status, Bylaws, Member Agreements, Anti-trust, etc.• Ongoing business development and membership recruitment
Development Process	<ul style="list-style-type: none">• Technical Decision Making• Project Life Cycle• Release Process
Infrastructure	<ul style="list-style-type: none">• Custom infrastructure using open source best practices• Security and reliability
Ecosystem Development	<ul style="list-style-type: none">• Marketing• Events• Training
IP Management	<ul style="list-style-type: none">• Code Provenance and License compliance• Trademark management• Legal defense and Collaboration

Case Study: Zowe

Value of Individual Project

Open Mainframe Project focuses on projects that matter

OPEN MAINFRAME PROJECT

Zowe

Major Problem

- Modernize integration with z/OS based applications and services
- Bridge the talent gap by enabling modern development stacks on z/OS

How OMP Innovated

- 2018 Open Mainframe Project added Zowe
- 2019 Zowe reached 1.0, launched Zowe Conformant to enable downstream ecosystem
- Investments in collaboration, ecosystem development, and infrastructure

Results - 2020

- 20000+ Commits, 200+ committers
- Zowe gaining significant mindshare in DevOps community
- 20+ Zowe Conformant offerings

Number of Open Source Projects – Millions on Github

Why host your project
at Open Mainframe
Project?

The LF is the leading commons for community assets

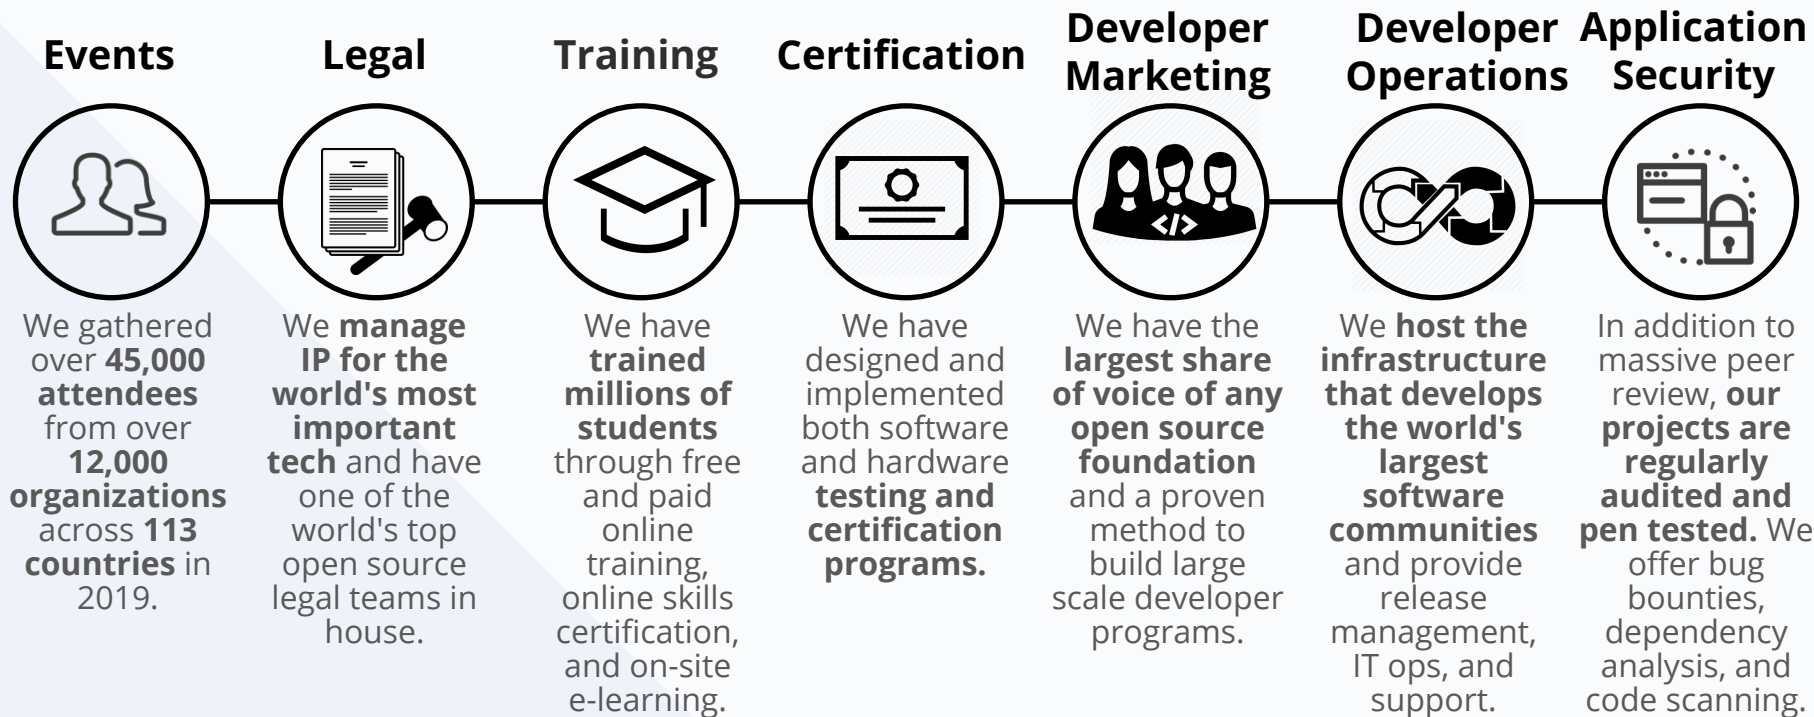

- The LF is the largest open source foundation, providing management of community assets for over 400 projects:
 - Over 3,400 source code repositories.
 - Over 700 trademark registrations and applications, plus hundreds of unregistered marks.
 - Over 700 project domains and DNS records.
 - Over 12,000 Contributor License Agreements signed for project communities that decide to require one.
- Neutral sponsorship for managing fundraising.
 - Over 1,600 unique member company relationships.
- Our communities raised over \$100 million in 2019 via over 6,500 invoices.
 - Our communities spent funds in over 180,000 separate transactions in 2019.
 - The LF reports its audited financials to its board.

Building an ecosystem around open source projects

- The LF has repeatedly shown its ability to build diverse ecosystems around open source projects incorporating developers, end users, tech giants, consulting companies, and startups.
- The LF hosts [Let's Encrypt](#), which provides the majority of the world's https certificates, and demonstrates our track record of helping to build sustainable, privacy-focused initiatives.
- The LF has a strong history of fostering a rich environment of downstream commercial and volunteer implementations.
 - There are hundreds of independent Linux [distributions](#).
 - There are over 100 [Certified Kubernetes](#) implementations, each of which has passed a comprehensive conformance test suite.
- CNCF has achieved unprecedented success in helping to grow awareness and adoption of Kubernetes, as demonstrated by Google Trends and KubeCon attendance.

Building large, sustainable ecosystems requires collective resources

What else can the Linux Foundation offer?

- The LF is a recognized and respected brand and can activate communications across tech, business, and social media channels.
- The LF runs one of the largest software training and certification [organizations](#) with millions of course graduates and hundreds of thousands of certified developers.
 - We can develop courses for AI, data, and analytics to train on using the apps and accessing the data.
 - We can also offer advanced courses for developers on integrating and customizing the upstream software.
- The LF runs the largest developer [conferences](#) in the world. (Due to COVID-19, these have currently switched to being virtual conferences.)
- The LF arranges third-party security [audits](#), privacy policy audits, and [bug bounties](#) for our critical hosted software.
- LF [CommunityBridge](#) offers paid internships with experienced mentors to increase the number and diversity of contributors.
- Submission of protocols to become ISO standards via the LF's [Joint Development Foundation](#).
- Hosting aggregated data projects, including via our [Community Data License Agreement](#)
- Other services including documentation, webinars, PR, and much more, with many examples described in the CNCF [annual report](#).

The Linux Foundation serves as a nonprofit home

- The LF has invoicing relationships with its 1,600 [members](#), representing nearly every significant tech company, hundreds of startups, and many government organizations.
 - We have strong relationships with all of the public cloud, mobile phone, and telecom organizations. For example, CNCF currently administers \$9M in [Google Cloud](#) credits and \$200k from [AWS](#) for our hosted projects.
- The LF can quickly receive and distribute funding.
- The mission of the LF, a 501(c)(6) nonprofit, is to support the creation of sustainable open source ecosystems and public health is a natural next focus.
 - The LF fee for fiscal sponsorship services, which includes audited financials, is 9% of the first million dollars per year and 6% of additional funds.

Question: Value of a Foundation?

There have been times when projects have asked what the value of an open source foundation can offer them?

A basic premise behind the LF, and open source in general, is that most interactions are positive-sum. There is no fixed amount of investment, mindshare, or development contributions that is allocated to specific projects. Just as open source development is based on the idea that, collectively, we are smarter than any one of us, open source foundations work to make the entire community better off. **Equally important, a neutral home for a project and community fosters this type of positive-sum thinking and drives growth and diversity that we believe are core elements of a successful open source project.**

Professional Services + Open Source Foundation

Open Mainframe Project provides a unique set of services for the mainframe community that goes beyond the simple mailing list, code repository, and website. You should host your project at Open Mainframe Project because:

Foundation

- A neutral home for your project increases the willingness of developers from other companies and independent developers to collaborate, contribute, and become committers.
- Endorsement by leading mainframe architects of the Open Mainframe Project's [Technical Advisory Council](#) is an independent signal of the quality of your project.
- Ability to leverage Open Mainframe Project mainframe infrastructure for your CI/CD needs.
- You will have access to funds for further investing in your project, including security, training, and documentation
- Partner academic institutions and next-gen students will have visibility into your project, resulting in new committers and class projects to help strengthen your project.
- Your existing committers still control your project, and we just ask that you document a neutral governance process (and if you don't have one, [we have one](#) that's a good starting point)

Staff

- You can work with our full-time press relations and analyst relations teams to increase awareness of and excitement about your project.
- Receive regular reports on press mentions and comparisons to similar projects.
- Open Mainframe Project is able to leverage the expertise of its parent organization, The Linux Foundation, which hosts other successful projects including the Linux kernel, Let's Encrypt, and Node.js. For example, Open Mainframe Project has worked on cross project collaboration between Kubernetes, HyperLedger, and Cloud Foundry for improving mainframe support of those technologies.
- You will have access to full-time Open Mainframe Project staff who are eager to assist your project in myriad ways and help make it successful

Events

- Your project will have unique opportunities to participate in our annual Open Mainframe Summit.
- Our world-class events team work with you to showcase your project at [our leading open source events](#) worldwide.
- We also work to ensure your project is represented at key mainframe events and meetups worldwide, such as SHARE, VM Workshop, and GSE.
- We have travel funding available for your non-corporate-backed developers and to increase attendance of women and other underrepresented minorities.
- We will work with your community to offer a customized "event in a box", so that your team can easily participate in events worldwide with little overhead.
- We host virtual events, scaling from webinars to multi-day events
- And for all events, we can promote on social and our blog of the participation, as well as track community metrics to for your community to better understand the impact of participation on your community.

...and more!

Bringing your
project here

Anna Karenina Principle of Open Source

- › https://en.wikipedia.org/wiki/Anna_Karenina_principle
- › All happy open source projects are alike; each unhappy open source project is unhappy in its own way...
- › The “LF Way” is that there is no one way...
- › The LF assumes that each open source project is unhappy/different in its own way and that leads to building a unique governance and solution to sustain their communities...

Basic requirements for hosting a project at Open Mainframe Project

The project must:

- ❑ use an approved OSI open source license, preferably inline with the [Open Mainframe Project IP Policy](#);
- ❑ be supported by a [TAC member](#);
- ❑ allow neutral ownership of project assets such as a trademark, domain or GitHub account (the community can define rules and manage them);
- ❑ technical do-ocracy and separation of business governance from technical governance (we're flexible on the model) clearly documented in a charter;
- ❑ allow anyone to participate in the technical community, whether or not a financial member or supporter of the project

Often projects are new open source project, but that isn't a requirement - existing projects are welcome!

Project Preparation Checklist

- ☐ Prepare draft mission and scope statement
- ☐ Identify internal teams within mission and scope
- ☐ Identify developers internally
- ☐ Analyze code for identification of licenses, license quality and project dependencies
- ☐ Assess potential universe of project participants
- ☐ Identify ecosystem constituents and concerns of each
- ☐ Identify any trademarks leveraged by the project (these will be owned by the LF neutrally)
- ☐ Outline infrastructure, marketing any other requirements needed for the project
- ☐ Complete the [project proposal](#) and submit to the TAC for consideration

The Open Mainframe Project staff is happy to engage and advise during this process - let us know how we can help!

Project Trademarks

- › Our project communities control the name of the project, not any one member or company contributor
- › In order to provide for neutral ownership of project assets, we require that The Linux Foundation entities own the trademarks leveraged by the project.
- › In the event that a trademark is already in use by the sponsoring organization, we recommend that the project create a new name to operate under or the owner assign the interest in the mark to The Linux Foundation.
- › See <http://fossmarks.org> for an education on trademarks in open source

Learn more about the Open Mainframe Project

- Find out more and subscribe to our newsletter at www.openmainframeproject.org
- Discover any of our 15 hosted projects and working groups at <https://www.openmainframeproject.org/projects>
- Organizational membership opportunities at <https://www.openmainframeproject.org/about/join> or email at membership@openmainframeproject.com
 - If you are ready to pursue corporate members, complete the paperwork at <https://joinnow.openmainframeproject.org>
